

EXTENDED PROFILE

In order to provide better service to our clients meeting the new changes in Pesticide Regulations in US and around the world, we are offering the most comprehensive screen pesticide profile. The profile includes the most common pesticides used today and the one which has been used in the past. Using the most advanced instrumentation technique such as Triple Quad MS/MS and the newest extraction procedure we are able to screen many type of sample at lower detection limit (the detection limit may be influenced by the type of sample). Any positive result from this profile is double confirmed by a different detector or instrument column.

COMPOUND NAME	MDL (ppm)	COMPOUND NAME	MDL (ppm)	COMPOUND NAME	MDL (ppm)
